

GRASS SLASHER

The Major Grass Slashers are single rotor machines ideally suited for cutting rough pastures, forestry ridges, grass verges, heathland and areas where rushes and heather prevail.

The blade system is capable of tackling material of up to 30mm in diameter. Each machine is fitted with two heavy duty swinging blades fitted to a compound blade beam.

Protection is given to the tractor by using a shear-bolt in the PTO shaft. The cutting height is set by adjusting the two side skids.

The skids have wide runners preventing damage to the ground.

Slasher Blades

Model	Working Width	Transport Width	No. of Blades	No. of Rotors	Power (HP)	PTO rpm	Blade Speed	Cutting Height	Weight
601SL	1.6m (5' 2")	1.9m (6' 1")	2	1	25 - 50	540	65m/s	12-250mm	284kg
605SL	1.73m (5' 5")	2m (6' 5")	2	1	30 - 60	540	72m/s	12-250mm	365kg
